Printouts will be sent out.

3.1.5.4.- HEPATITIS C – SCREENING AND TREATMENT

. Pursuant to N.J.S.A. 26:2T-1 et seq., NJDOC is responsible for developing and providing Hepatitis C related services in coordination with the New Jersey Department of Health and Senior Services. In accordance with the above, NJDOC through its health care provider, requires the following practices in addition to compliance with the current Federal Bureau of Prisons (FBOP) guidelines on this subject.

A. At all NJDOC reception sites, as a part of inmate orientation and health education UMDNJ will provide a module of inmate education to all incoming inmates regarding Hepatitis C infection. This program will include details regarding route of infection, symptoms, long term consequences and potential treatment.

B. At all NJDOC Facilities, UMDNJ will schedule and offer similar training/education to the general inmate populations regarding Hepatitis C at least once a year . Where available, this training can be offered via the Facility internal television network.

C. During inmate education and routine health care encounters, UMDNJ will offer medical testing for Hepatitis C infection and encourage testing for all high risk individuals.

D. Upon request from any inmate patient UMDNJ will promptly schedule and perform the standard testing for Hepatitis C antibody. Inmate will promptly be advised of the results of this test and have a clinical encounter to provide the results and the implications for the specific patient.

E. UMDNJ will promptly perform all necessary⁷ and appropriate tests to determine if the individual is a candidate for treatment intervention. The testing needed shall be a professional medical judgement based upon the latest guidelines from the Center for Disease Control, FBOP and other appropriate professional organizations, subject to NJDOC Medical Director's approval. The basis for a judgement that a patient is at risk for non-compliance or poor outcome must be well documented. However, adult inmates will be educated about the potential risks and consequences of any non-compliance, and thereafter the compliance becomes the responsibility of the individual.

F. Inmates determined to be Hepatitis C positive will be provided with immunization against Hepatitis A and Hepatitis B when medically appropriate.

G. All individuals found medically qualified will be offered treatment intervention, as long as they can be reasonably expected to remain in NJDOC custody for the period required to complete then treatment regimen. The only administrative factors that would preclude the initiation of treatment would be a "max date" or "confirmed parole date" that would prevent the completion of treatment during confinement with NJDOC. In such cases, inmates should be advised that a full treatment program should be undertaken following release to the community. In these cases, UMDNJ shall establish linkages with the community for after care referral and discharge planning.

H. All stages of Hepatitis C care (screening, evaluation, and treatment) are subject to individual consent.

I. UMDNJ will document all Hepatitis C care given to each patient in the EMR. This record will include education, offering testing, patient consent/or refusal, patient education regarding test results, etc. . Reason for treatment denial or termination will be clearly documented. A signed inmate refusal form (form MR-021) will document all refusals of care offered.

J. In addition to providing the patient care noted above, UMDNJ will cooperate with NJDOC in seeking any grants or support from external agencies (e.g. U.S. department of Health, federal government, pharmaceutical sources) that might subsidize or assist NJDOC in funding the public health efforts inherent in this program.

3.1.4.19. RESOLUTION OF MEDICAL TREATMENT DISPUTES

The NJDOC Medical Director will be the final authority in matters of medical treatment disputes with UMDNJ.
